## Earthquake Is Essential For The Earth

Think about how life would be if there is no earthquake? Build an imagery of what Earth will look like. You will probably say that there would be less destruction, loss of lives and earth would be a safer place to live in. But earthquake is more than what you expect. We are all aware of all the damages but we never acknowledge what are the advantages. In this essay I want to prove how essential earthquake is.

First let us consider that it helps in understanding our Earth. Another point to consider is, it helps to avoid earth explosion, and lastly is land formation and economic growth. Because the creation of economy the key is catastrophe. According to experts earthquakes are helpful in understanding our Earth. How dynamic the process going in the internal and external of our world. The structure, process to measure how wide our resources and to study how earthquake affect our society and create different plan to mitigate it. Based on the different information geologists gain from earthquakes they can find important resources like water aquifers, oil, and natural gas. It also helps to deposit nutrients and minerals needed for soil. Imagine your body without a system. Would it work like how it used to be? No right it's like a world without on earthquake that serves as a system and engine. This means a creation of economy the key is catastrophe.

Not only it helps us to gain knowledge about our planet but also it increases the growth of our economy because of different land forms. You will not know Mount Fuji, Mount Everest, and Mount Apo without the unpredictable occurrence of earthquakes. We all know that these mountains are one of the beautiful catastrophes our earth produce and mostly visited by different tourists. This increases the economic growth of society, cause by the incredible art that our planet create. The creation of economy the key is catastrophe. Lastly our earth might explode without shaking and subduction of the ground. It will be hard for the earth to release heat inside the core. We cannot call the earth as a habitable planet. Picture yourself not living in this world what God creates. Indeed in a creation of economy the Key is catastrophe.

In conclusion we need to realize that earthquakes are also essential and beneficial for the earth and for us as a human being living in this place where unique things and events happen. Taking every points that are being presented into consideration. How it helps in understanding the earth, to prevent explosion of the Earth and how it affects the growth of our economy. Realizing how each one of us would be just dirt and dust if our home planet will be an inhabitable planet. Unpredictable devastating events like earthquake that occur in the world is like those problems we experience in our life it is naturally given to us to build ourselves.
