
How the education system in India can be improved

It wouldn't be wrong to say that the future of India or any other country lies on how well is the education system of that country. Hereby, if you see the statistics of the education system in our country then you will notice that there are approximately 500 million people who hardly have access to education. There are so many mind blocks that occur as a hindrance for the Indian Education System. Hence, pursuing a professional degree isn't that important but basic education as to how to read and write is a basic need for the society.

These days there are so many scams in the field of education in India just like how the marks in CBSE Board Examinations are increased; such cases make the society question the intellect and the intelligence of a student. India is unsullied on counts of the economic measures including the foreign exchange reserves and once the school education system of India improves, our country will reach to a great height because lack of education also causes lack of employment.

There are certain ways how to the school education system of India can be worked upon, these ways are under mentioned:

1. **Effective Education Law:** Every citizen of India has been given a Fundamental Right to Education but it has been so effective in India because the citizens are not well informed about their fundamental rights and duties. The government must work on making this right more effective by increasing the awareness of the schemes and by making some minute changes in the already active schemes.
2. **Betterment in Government Schools:** Nowadays it has become very important for the government schools to take a major step in reforming the education system as India constitutes villages and semi-urban areas, parents anyway are always in double minds whether they should enroll their children in government schools or not. Various changes should be made in government schools such as the infrastructure, teachers, etc.
3. **Open- Schooling:** Open- schooling can also be known as alternate education and this plays a major role in the improvement of the education system of the country. Open-Schooling must be given more importance as compared to its condition today, it focuses on Vocational Training, Life Enrichment and Community Oriented programs besides academic and general courses.
4. **Reservation:** This is one topic which is controversial. Removal of the quota system will bring a major change and improvement in the education system and if this cannot be totally eliminated then caste should not be the deciding the factor but the economical condition can be the deciding factor because due to the quota system there are so many

students who don't get chances for admission in nice government as well as private schools.

5. Technology Based Education: Smart classes should be conducted in all the schools rather than bookish knowledge since this is the era of Technology, teachers should be friendly with computers and must have clear methodologies. Practical knowledge is becoming the need of the hour because a child can always retain what he sees and hears in his/ her memory rather than what he reads.

Conclusion: As compared to the ancient times there has been a major change in the education system but still some changes can always be made in the system which will benefit the country. However, these are just few ways to improve the education system, there are more ways on which the government can work. Hence, there is always scope for a better school education system in our country, India.
