
Why I Want to Improve my Academic Scores in Math, English, Computer Science, and Engineering

Coming into highschool, I have high hopes for many goals both academically and personally. The goals academically are improving in all academic fields, specifically Math, English, Computer Science, and Engineer. Besides those, the goals I hope to accomplish personally are to be a healthier person, create a bigger bond with my peers and teachers, and to be able to be more outgoing both in class and outside of class. Hopefully after accomplishing these goals, I will be ready for sophomore year and be a better student in general.

To begin, the main goal for all my years at Oxford has always been to improve in all academic fields. This year is no different, therefore, I hope to improve, specifically, in Math, English, Computer Science, and Engineer. For Math, I want to learn and understand all the new concepts that will be taught, such as basic trigonometry and new vocabulary. In English, I wish to become a better reader and writer. To accomplish this, I hope to learn new syntax and new ways to look at texts to be able to have a better analysis. Also, for Computer Science, I want to learn the basics of programming in different languages, like Lua, Java, and Python. Lastly, in Engineering, I hope to learn how to use this skills I learn to be a better problem solver and to be able to create mechanisms from scratch.

Additionally, another one of my goals this year is to be a healthier person. Being healthier as a student boosts your confidence and motivation, therefore, making learning more exciting and efficient. With this, it will definitely help accomplish my main goal to improve in all academic fields. Anyways, to be healthier, I plan to do some form of exercise everyday. Although I will do other athletic things in PE, my main form of exercise will most likely be soccer. This is because I play soccer almost everyday after school or outside of school and that I hope to join Oxford JV Girls Soccer Team.

Another personal goal that I would like to accomplish is to create a bigger bond with my peers and teacher. In middle school, I was only friends with about a third of my grade, which makes it harder to work with the other two thirds, now, that I have classes with them this year. So, being able to make new friends and build new bonds will help me not only in classes, but also in life. Also, I would like to create a bigger bond with my teachers because this will help me communicate with them when I need to and it will make me a better learner.

Finally, speaking of creating bigger bonds, another goal is to be more outgoing. I've always been more on the shy side, which isn't what a good student should be. Therefore, I plan to join clubs, such as STEM and the Key Club, to become a role model. Not only will this make me become more outgoing, this will also be great for my college applications. Additionally, I will be participating in more school events, like the dances and activities. I will also be more outgoing in class. This means that I have to be more comfortable with raising my hand and speaking up whenever I have a thought.

In conclusion, I have big plans for making this the year where I change and become a better student. To clarify, I have high hopes for improving in all academic fields, specifically, Math, English, Computer Science, and Engineer. I also have personal goals to be more healthy by

exercising more frequently and to be more outgoing by creating bigger bonds with my peers and teachers and to be more participating in school. All in all, I hope to accomplish all these goals to have a wonderful year.
